Software Engineer 80% to 100%

For our dynamic and innovative team in Zurich we are looking for an experienced Software Engineer with strong analytical skills and the necessary pragmatism to continue the successful growth of our Startup quitt.ch, Switzerland's only automated Internet platform for private persons allowing them to legally employ their cleaning ladies, nannies, babysitters, etc. with just a few clicks.

With more than 6000 active users, the further growth of quitt.ch depends on solid software engineering. As a software engineer for quitt.ch, you are actively involved in shaping our product. Your interdisciplinary thinking allows you to discover bottlenecks and potential improvements for our system in order to further optimize the internal processes. You can estimate the complexity of features and prioritize them accordingly. Your quality-oriented coding style makes sure that the customer satisfaction of quitt.ch stays high or even improves. And last but not least, as a team-player you are motivated by working with other engineers in Zurich and in Romania.

We offer:

- Technical responsibility for a popular Swiss website
- A flat structure in our company, not endless vertical levels of management
- Although we are a startup we pay a salary conformity with the market (participation in the company possible)
- Flexible working hours

We are looking for:

- Someone who already has at least 3 years of experience in Web-based development
- Who is passionate about creating great software,
- Who can work and think independently,
- Who has good analytical skills, is proactive, motivated, well-organized and very thorough in his/her work.

Pensum: 80% to 100%

Place of work: Zürich

If you think you are the missing piece in our team, then we happily receive your application by e-mail directly to daniel.moser@servicehunter.ch. If you have questions, you can contact us also by e-mail or by phone (+41 44 520 14 92).
